Nex-Gen Lumina — Residential User Guide

Welcome to Lumina! Your installer has already set up your permanent LED lighting system. This guide covers everything you need to know to enjoy and control your lights from the Lumina app.

---

1. Signing In for the First Time

Download the App

Download **Lumina** from:

- **iPhone:** Apple App Store
- **Android:** Google Play Store

Sign In

1. Open the Lumina app
2. Tap **Sign In**
3. Enter the **email** and **temporary password** provided by your installer
4. You will be prompted to **change your password** — pick something memorable and secure

Welcome Wizard

The first time you open the app, a short welcome wizard walks you through a few quick steps:

A. Network Permission

- The app asks permission to communicate with your lighting system over WiFi
- Tap **Allow** when prompted
- On iPhone: A popup asks for Local Network access — tap **OK**
- On Android: Location permission is needed for WiFi scanning — tap **Allow**

B. Camera Permission (optional)

- This is used for uploading a photo of your house to personalize the dashboard
- Feel free to skip this — you can always add a photo later

C. Choose Your Preferred White

- Your lights will cycle through 5 white presets so you can see them in person:

Preset	Description
Warm White	Cozy, amber-tinted glow (like candlelight)
Soft White	Gentle, slightly warm tone
Natural White	Balanced, true-to-life white
Cool White	Clean, blue-tinted white
Bright White	Pure white from the dedicated white LED

- Tap each one to see it live on your lights
- Pick your **primary white** (your everyday go-to)
- The app suggests a **complementary white** to pair with it
- You can also create a custom white using the color sliders

> **Tip:** Most homeowners love Warm White for everyday evenings and Bright White when they need full visibility. You can change these anytime.

D. Personalization

If your installer didn't already set these up, you may be asked to choose:

- **Favorite Sports Teams** — Lumina creates game-day lighting automatically
- **Favorite Holidays** — Seasonal themes activate around your chosen holidays
- **Lighting Style** — Slide between "Subtle & Elegant" and "Bold & Energetic"

After the wizard finishes, you land on your **Home Dashboard** — your main control center.

---

2. The Dashboard — Your Control Center

The dashboard is your home base. Everything you need for day-to-day lighting is right here.

Hero Image

The large image at the top shows your home (or a default image until you upload your own photo). Your lighting controls sit on top of this image.

Power Button

The circular button toggles your lights **on** and **off**. It glows cyan when the lights are on.

Brightness Slider

The vertical slider adjusts brightness from 0% to 100%. Changes happen instantly on your lights — slide it up to brighten, down to dim.

Quick Presets

Small buttons along the right side of the hero image give you one-tap access to your go-to looks:

Preset	What It Does
Warm White	Your primary white setting
Bright White	Your complementary white
Run Schedule	Activates tonight's scheduled pattern
Custom Favorites	Any patterns you have saved

> **Tip:** Long-press a preset to see its details or remove it from your favorites.

Smart Suggestions

Below the hero image, Lumina may show timely suggestions like:

- "Game day tonight — Chiefs colors ready?"
- "Sunset approaching — warm white?"
- "Holiday coming up — Christmas theme available"

Tap a suggestion to apply it instantly.

Tonight Card

Shows what is scheduled for tonight, including a color preview of the pattern that will play.

---

3. Getting Around — The Bottom Bar

The app has 5 tabs along the bottom of the screen:

Tab	Icon	What It Is For
Home	House	Main dashboard with your controls
Schedule	Calendar	View and edit your weekly lighting schedule
Lumina	Center star	Your AI lighting assistant
Explore	Compass	Browse the full pattern library
System	Gear	Settings, preferences, and family members

---

4. Controlling Your Lights

Everyday Controls (Dashboard)

- **Turn on/off:** Tap the power button
- **Adjust brightness:** Slide the brightness control up or down
- **Apply a preset:** Tap any quick preset button
- **Apply a favorite:** Tap a pattern in the Favorites area

Applying a Pattern from Explore

1. Tap the **Explore** tab
2. Browse categories like Holidays, Sports, Nature, Mood, and more
3. Tap a category to see the patterns inside
4. Tap any pattern to **preview it live** on your lights
5. Tap the **heart icon** to save it as a favorite for quick access later

Built-In Scenes

Your system includes several pre-made scenes:

Scene	Description
Off	Lights off
Warm White	Your chosen warm white
Bright White	Your chosen bright white
Night Light	Dim, gentle glow

Saving a Custom Scene

You can save your current lighting setup so you can recall it anytime:

1. Set your lights exactly how you want them (colors, brightness, effect)
2. On the dashboard, tap **Save Current Design**
3. Give your scene a name
4. It appears in your Favorites for one-tap access going forward

---

5. Lumina AI — Talk to Your Lights

Lumina is your personal lighting assistant. You can reach it from:

- The **Lumina tab** (center of the bottom bar) for full-screen chat

- The **chat bar** at the bottom of the dashboard for quick commands

How to Use Lumina

Just type or speak naturally. Lumina understands plain English:

Say This	Lumina Does This
"Turn on warm white"	Applies your warm white preset
"Chiefs colors"	Sets your lights to your team's colors
"Make it look like Christmas"	Applies a Christmas theme
"Something warm and relaxing"	Picks a calming warm pattern
"Brighten up"	Increases brightness
"Turn off"	Powers down the lights
"Set a schedule for warm white at sunset"	Creates an automated schedule
"Party mode"	Applies a colorful, animated effect

Voice Commands

1. Tap the **microphone icon** in the chat bar
2. Speak your command
3. Lumina automatically submits after you pause for about 2 seconds

> **Tip:** Lumina learns your preferences over time. The more you use it, the better its suggestions become.

---

6. Smart Scheduling

Viewing Your Schedule

1. Tap the **Schedule** tab
2. The week view shows each day with its scheduled patterns
3. Tap any day to see details — pattern name, times, and a color preview
4. Use the arrows to move between weeks

Creating a Schedule

1. On the Schedule tab, tap the **+** button
2. Choose:
    - **Pattern/Scene** — which look you want
    - **Start Time** — when to turn on (you can also pick Sunrise or Sunset)
    - **End Time** — when to turn off (optional)
    - **Repeat Days** — which days of the week
3. Tap **Save**

Your schedule is stored directly on the lighting controller, so it runs automatically even if the app is closed or your phone is off.

Auto-Pilot

Lumina's Auto-Pilot creates a weekly lighting plan for you based on:

- Your favorite sports teams' game schedules
- Upcoming holidays you selected
- Your lighting style preferences
- Time of year and local sunset times

How Auto-Pilot works:

- A fresh schedule preview arrives each **week**
- Depending on your autonomy setting:
    - **Ask Me First:** You approve each week before it activates
    - **Smart Suggestions:** Applies automatically after 24 hours if you don't respond
    - **Full Auto-Pilot:** Applies right away with no approval needed

You can always make changes to the Auto-Pilot schedule by editing it manually.

---

7. Explore — The Pattern Library

Browsing Patterns

1. Tap the **Explore** tab
2. Browse by category:
    - **Holidays** — Christmas, Halloween, 4th of July, and more
    - **Sports** — Team colors and game-day themes
    - **Nature** — Ocean, forest, sunset, aurora
    - **Mood** — Relaxing, energetic, romantic
    - **Seasonal** — Spring, summer, fall, winter
    - **Whites** — Various white tones and temperatures
    - **Solid Colors** — Single-color fills
    - **Animations** — Moving effects like chase, breathe, and rainbow

Previewing and Applying

- Tap a pattern to **preview it live** on your lights
- Tap the **heart** to add it to your favorites
- Tap **Apply** to keep it active

Editing a Pattern

- Tap the **edit icon** on any pattern
- Adjust speed, intensity, brightness, and colors to your taste
- Save it as a new custom pattern that is all yours

---

8. White Presets — My Whites

Your lighting system uses **RGBW LEDs**, which means each LED has Red, Green, Blue, and a dedicated White channel. This produces beautiful, true whites that regular color-only LEDs simply cannot match.

Changing Your White Presets

1. Go to the **System** tab and tap **My Whites**
2. You will see the 5 built-in presets along with any custom settings
3. Tap a preset to preview it live on your lights
4. Pick your new **Primary** and **Complement** whites
5. Tap **Save**

Creating a Custom White

Use the R, G, B, and W sliders to blend your perfect white tone. The W slider controls the dedicated white LED independently, letting you fine-tune warmth and brightness to get exactly the look you want.

---

9. Remote Access — Control from Anywhere

By default, Lumina controls your lights when you are connected to your home WiFi network. If your installer set up remote access, you can also control your lights when you are away from home — at work, on vacation, or anywhere with an internet connection.

How It Works

Your installer configured a small bridge device that stays connected to your home network. When you open the Lumina app away from home, your commands are securely relayed through this bridge to your lights. You do not need to do anything special — the app detects whether you are home or away and routes commands automatically.

Checking Remote Access Status

1. Go to the **System** tab
2. Look for the **Remote Access** section
3. A green indicator means remote access is active and working
4. If you see a yellow or red indicator, your bridge device may need attention — contact your installer

> **Tip:** If remote access was not part of your original installation, ask your installer about adding it. It is a simple upgrade that makes a big difference.

10. My Properties

If you have Lumina systems at multiple locations (main home, vacation house, lake house, etc.), the **My Properties** screen lets you organize them.

Accessing My Properties

1. Go to the **System** tab
2. Tap **My Properties**

Adding a Property

1. Tap the **+** button or **Add Property**
2. Enter a name (e.g., "Lake House", "Beach Condo")
3. Start typing the address --- Google Places will suggest matching addresses as you type. Tap a suggestion to auto-fill, or type the full address manually.
4. Choose an icon that represents the property
5. Tap **Save**

Linking Controllers to a Property

After creating a property, you need to link your WLED controllers to it:

1. Tap the **Controllers** button on the property card
2. A list of all your registered controllers appears
3. Toggle the switch next to each controller that belongs to this property
4. Changes save automatically

You can also tap "Tap to link controllers" text on the property card as a shortcut.

Setting a Primary Property

If you have multiple properties, set one as your primary (default) property:

1. Tap **Set Primary** on the property card
2. The primary property is highlighted and loads by default when you open the app

Editing or Deleting

- Tap **Edit** on any property card to change the name, address, or icon
- Tap **Delete** to remove a property (this unlinks all controllers but does not delete them)

---

11. Simple Mode

If you prefer a streamlined, no-frills experience, Simple Mode is for you.

Turning On Simple Mode

1. Go to the **System** tab and open **Settings**
2. Toggle **Simple Mode** on
3. The app simplifies to show only:
    - A Home screen with large, easy-to-tap buttons
    - A Settings screen
    - Your top 3 to 5 favorite presets
    - A simple brightness control

This is great for family members who just want to turn the lights on and off without browsing through all the options. Toggle Simple Mode off anytime to return to the full interface.

---

12. Adding Family Members

You can invite up to 5 family members to control your lights from their own phones.

How to Invite Someone

1. Go to the **System** tab and tap **Manage Users**
2. Tap **Invite User**
3. Enter their email address
4. They will receive an email invitation with a link to download Lumina and join your home

Each family member gets their own login and can control the lights, set favorites, and talk to Lumina. Everyone shares the same lighting system and schedules.

> **Tip:** Family members who prefer a simpler experience can turn on Simple Mode on their own device without affecting anyone else.

---

13. Connection Status

The app keeps you informed about the connection to your lighting system:

Indicator	What It Means
Green dot	Connected — your lights are responding normally
"Reconnecting..."	Brief connection hiccup — the app is automatically retrying
"System Offline"	Cannot reach your lights — usually means your phone is not on the same WiFi, or the controller needs a moment to restart
Bridge icon (green)	Remote access is active — you are controlling lights from away
Bridge icon (yellow)	Remote access is having trouble — the bridge may need attention

If your lights are not responding, the most common fix is simply making sure your phone is connected to your home WiFi. If you are away from home and remote access is not working, contact your installer for help.

---

14. Daily Use Scenarios

Evening Routine

1. **Open Lumina** — Dashboard loads with live status

2. **Tap "Run Schedule"** — tonight's scheduled pattern activates
3. Or **ask Lumina:** "Warm white for the evening"
4. **Adjust brightness** with the slider as needed
5. **Before bed:** Tap the power button or say "Turn off"

Game Day

1. Lumina may suggest: "Game day tonight — Chiefs colors ready?"
2. Tap **Yes** to apply
3. Or ask: "Chiefs colors" or "Game day mode"
4. Lights automatically return to your regular schedule after the game

Holiday Season

1. Auto-Pilot activates holiday themes around your selected holidays
2. Or browse **Explore** → **Holidays** → choose a theme
3. Schedule it: "Schedule Christmas lights from sunset to 11 PM"

Hosting a Party

1. Ask Lumina: "Party mode" or "Something fun and colorful"
2. Or browse **Explore** → **Mood** → **Party** / **Energetic**
3. Enable **Audio Reactive** mode if available for music sync

---

15. Troubleshooting

Lights not responding

- Verify WiFi connection (same network as controller)
- Check controller power — look for status LED on the device
- Force-close the app and reopen
- In the app: **System** → **Controllers** → tap **Refresh**

App says "No controllers found"

- Ensure your phone has WiFi and Location permissions enabled
- On iPhone: Check Settings → Lumina → Local Network is ON
- Try adding the controller manually by IP address

Patterns look different than expected

- Check brightness level — dim settings mute colors
- Verify which lighting area/channel is selected
- Some effects are designed for specific LED counts

Forgot your password

- On the login screen, tap **Forgot Password**
- Enter your email address
- Check your inbox for a reset link
- Create a new password

Remote access not working

- Verify Remote Access is **enabled** in Settings
- For Bridge mode: check that the ESP32 bridge device is powered on
- For Webhook mode: verify port forwarding and Dynamic DNS
- Test connectivity from the Remote Access settings screen

---

16. Quick Reference Card

Action	How
Turn lights on/off	Tap the power button on the dashboard
Change brightness	Slide the brightness control up or down
Apply warm white	Tap the "Warm White" preset
Apply a pattern	Explore tab, browse, then tap

Ask Lumina	Chat bar on the dashboard — type or speak
View your schedule	Schedule tab
Add a new schedule	Schedule tab, then tap the + button
Save a scene	Dashboard, then tap "Save Current Design"
Change white presets	System tab, then My Whites
Enable Simple Mode	System tab, then Settings, then Simple Mode toggle
Add a family member	System tab, then Manage Users, then Invite User
Check connection status	Look at the status indicator on the dashboard

---

Need Help?

- **In the app:** Ask Lumina — try "Help" or "How do I..."
- **Email:** support@nexgenled.com
- **Your installer:** Contact the dealer who installed your system

For troubleshooting, see the separate Lumina Troubleshooting Guide.

Nex-Gen Lumina v2.1 — Residential User Guide — March 2026
