Nex-Gen Lumina — Residential User Guide

Welcome to Lumina. Your installer has already done the hard part — your lights are up, tested, and ready. This guide is how you enjoy them: setting the right mood for a quiet evening, lighting up for the big game, running holidays on autopilot, or just telling Lumina what you want and watching the house change. Permanent lighting that works as hard as you do.

What you'll need

- Your phone (iPhone or Android)
- The **Lumina** app — free from the App Store or Google Play
- Your **email and temporary password** from your installer — you'll change the password on first sign-in
- A few minutes the first time, for a short welcome walkthrough

---

1. Signing in for the first time

Download the app

- **iPhone:** Apple App Store
- **Android:** Google Play Store

Sign in

1. Open Lumina
2. Tap **Sign In**
3. Enter the **email** and **temporary password** your installer gave you
4. You'll be prompted to **change your password** — pick something memorable and secure

Welcome walkthrough

The first time you open the app, a short wizard gets you set up:

A. Network permission Lumina needs to see your lighting system on your home Wi-Fi.

- Tap **Allow** when asked
- On iPhone: a popup asks for Local Network access — tap **OK**
- On Android: location permission is used for Wi-Fi scanning — tap **Allow**

B. Camera permission (optional) This is for snapping a photo of your house to personalize the dashboard. Skip it if you'd rather — you can add a photo anytime.

C. Choose your white Your lights cycle through 5 white presets so you can see each one in person:

Preset	How it feels
Warm White	Cozy, amber, candlelight
Soft White	Gentle, slightly warm
Natural White	Balanced, true-to-life
Cool White	Clean, slightly blue
Bright White	Crisp and pure

- Tap each one to see it on your lights
- Pick your **primary white** (your everyday go-to)
- The app suggests a **complement** to pair with it
- You can also build a custom white with the color sliders

> **Tip:** Most homeowners pick Warm White for evenings and Bright White for when they want full visibility. You can change these anytime.

D. Personalization

If your installer didn't set these for you, you'll pick:

- **Favorite sports teams** — Lumina handles game-day lighting automatically

- **Favorite holidays** — Seasonal themes kick in around the holidays you pick
- **Lighting style** — Slide between "Subtle & Elegant" and "Bold & Energetic"

When the wizard wraps, you land on your **Home Dashboard** — your daily control center.

---

2. The dashboard — your home base

The dashboard is where you'll spend most of your time. Everything for day-to-day control is right here.

Hero image

The big image at the top is your home (or a default until you add a photo). Your controls sit right on it.

Power button

Toggles your lights on and off. Glows cyan when the lights are on.

Brightness slider

Slide up to brighten, down to dim. Changes happen instantly.

Quick presets

One-tap looks along the right side:

Preset	What it does
Warm White	Your primary white
Bright White	Your complementary white
Run Schedule	Activates tonight's scheduled pattern
Custom Favorites	Anything you've saved

> **Tip:** Long-press a preset to see its details or remove it from favorites.

Smart suggestions

Below the hero image, Lumina may nudge you with timely ideas:

- "Game day tonight — Chiefs colors ready?"
- "Sunset approaching — warm white?"
- "Holiday coming up — Christmas theme available"

Tap a suggestion to apply it instantly.

Tonight card

Shows what's scheduled for tonight, with a color preview.

---

3. Getting around

Five tabs along the bottom:

Tab	Icon	What it's for
Home	House	Main dashboard with your controls
Schedule	Calendar	View and edit your weekly lighting
Lumina	Center star	Your AI lighting assistant
Explore	Compass	The full pattern library
System	Gear	Settings, preferences, family members

---

4. Controlling your lights

Day-to-day (dashboard)

- **On / off** — tap the power button
- **Brightness** — slide up or down
- **A preset** — tap any quick preset
- **A favorite** — tap any pattern in Favorites

Applying a pattern from Explore

1. Tap **Explore**
2. Browse categories — Holidays, Sports, Nature, Mood, and more
3. Tap any category to see the patterns inside
4. Tap a pattern to **preview it live** on your lights
5. Tap the **heart icon** to save it as a favorite for one-tap access later

Built-in scenes

Your system ships with a few pre-made scenes:

Scene	What it is
Off	Lights off
Warm White	Your chosen warm white
Bright White	Your chosen bright white
Night Light	A soft, dim glow

Saving your own scene

Got a look you love? Save it.

1. Set your lights exactly how you want them
2. On the dashboard, tap **Save Current Design**
3. Give your scene a name
4. It shows up in Favorites for one-tap access later

Music-reactive lighting

Want the lights to move with the music? If your controller supports it (most Nex-Gen controllers do), Audio Mode makes it happen. See the **Audio Mode Guide** for the full walkthrough — it's one of the features guests talk about the most.

---

5. Lumina AI — talk to your lights

Lumina is your personal lighting assistant. You'll find it in two places:

- The **Lumina tab** (center of the bottom bar) for full-screen chat
- The **chat bar** at the bottom of the dashboard for quick commands

How to use it

Type or speak naturally. Lumina understands plain English:

Say this	Lumina does this
"Turn on warm white"	Applies your warm white preset
"Chiefs colors"	Sets the lights to your team
"Make it look like Christmas"	Applies a Christmas theme
"Something warm and relaxing"	Picks a calm, warm pattern
"Brighten up"	Raises brightness
"Turn off"	Powers down
"Set a schedule for warm white at sunset"	Creates an automated schedule
"Party mode"	Applies a colorful, animated effect

Voice commands

1. Tap the **microphone icon** in the chat bar
2. Say your command

3. Lumina submits after about a 2-second pause

> **Tip:** Lumina learns your preferences over time. The more you use it, the sharper the suggestions get.

---

6. Smart scheduling

Viewing your schedule

1. Tap **Schedule**
2. The week view shows each day with its scheduled patterns
3. Tap a day for details — pattern name, times, color preview
4. Arrows move between weeks

Sync status indicator

Below the title bar on the Schedule tab, a small status row shows the result of your last sync to the controller:

Indicator	Meaning
Green ✓ "Synced · 3m ago"	Last sync succeeded — schedules are live on the controller
Amber ⚠ "Synced with N warnings"	Schedules saved, but one or more presets didn't write cleanly — usually a brief network blip; tap **Sync** again
Red ☁ "Controller not reachable..."	The app can't reach your controller — make sure your phone is on the same Wi-Fi as your lighting system, then tap **Sync**

Until you tap the **Sync** button at the top right at least once per session, the row stays hidden.

Time format

Lumina respects your preferred time format throughout the schedule UI. Set **System → Edit Profile → Display Preferences → Time Format** to **12-hour (7:05 PM)** or **24-hour (19:05)**. The setting applies to schedule rows, conflict-resolution dialogs, sun-time labels, autopilot weekly previews, and the schedule detail sheet — everywhere a time appears.

Creating a schedule

1. On the Schedule tab, tap **+**
2. Pick:
    - **Pattern/Scene** — which look you want
    - **Start Time** — clock time, or Sunrise/Sunset
    - **End Time** (optional)
    - **Repeat Days** — which days of the week
3. Tap **Save**

Your schedule lives on the lighting controller itself, so it runs even if the app is closed or your phone is off.

Auto-Pilot — your weekly plan, handled

Auto-Pilot creates a full weekly lighting plan based on:

- Your favorite teams' games
- Upcoming holidays you picked
- Your lighting style
- Local sunset times

How it works:

- A fresh schedule preview arrives each week
- Depending on your autonomy:
    - **Ask Me First** — you approve each week before it activates
    - **Smart Suggestions** — applies automatically after 24 hours if you don't respond
    - **Full Auto-Pilot** — applies right away, no approval needed

You can always make changes manually.

Autopilot Calendar — the whole week at a glance

Open it from the **Schedule** tab.

What you'll see:

Icon	Meaning
Lightning bolt	Auto-Pilot-generated event
Pin	Protected event — you created this manually, Auto-Pilot will never overwrite it

Using the calendar:

1. **Schedule** → **Autopilot Calendar**
2. A 7-day grid shows every upcoming lighting event with color previews
3. Use the **week navigator** arrows to jump forward or back
4. Tap any event to view details or make edits
5. Pull down to **refresh** and regenerate the plan

Behind the scenes:

- Each **Sunday evening**, Lumina generates your next week's plan
- It considers your teams, holidays, preferences, and local sunset times
- You get a push notification previewing the week ("Your Week in Lights")
- Anything you pinned manually is protected — Auto-Pilot leaves it alone

> **Tip:** Want full control over a specific night? Create a manual event for that day. Auto-Pilot will work around it.

---

7. Explore — the pattern library

Browsing

1. Tap **Explore**
2. Browse by category:

  - **Holidays** — Christmas, Halloween, 4th of July, and more
  - **Sports** — Team colors and game-day themes
  - **Nature** — Ocean, forest, sunset, aurora
  - **Mood** — Relaxing, energetic, romantic
  - **Seasonal** — Spring, summer, fall, winter
  - **Whites** — Tones and temperatures
  - **Solid Colors** — Single-color fills
  - **Animations** — Chase, breathe, rainbow

Previewing and applying

- Tap a pattern to **preview it live**
- Tap the **heart** to favorite it
- Tap **Apply** to keep it running

Tweaking a pattern

- Tap the **edit icon** on any pattern
- Adjust speed, intensity, brightness, and colors
- Save as your own custom pattern

---

8. AI Design Studio — describe it, see it

Want something custom? Just describe it in plain English — the AI Design Studio builds it for you. No technical knowledge required.

Using it

1. Open **AI Design Studio** from the **Explore** tab or **System** tab
2. Describe what you want, for example:
   - "Red and gold chase from left to right"
   - "Gentle ocean waves"
   - "Alternating green and white for St. Patrick's Day"
3. Lumina interprets your description and shows a live preview

4. The preview plays on a **canvas** with your roofline, so you see exactly how it'll look on your home
5. If Lumina needs more info, it'll ask a follow-up ("How fast should the chase move?")
6. Fine-tune manually with the control panel if you want
7. Tap **Save** to add the design to **My Designs** for future one-tap access

> **Tip:** Your saved designs live in My Designs on the Explore tab. Apply them anytime with a single tap — just like any other pattern.

---

9. White presets — My Whites

Your lighting uses LEDs with a dedicated white channel, so whites come out clean and true — much better than regular color-only LEDs.

Changing your whites

1. **System** → **My Whites**
2. You'll see the 5 built-in presets plus any custom settings
3. Tap a preset to preview it live
4. Pick your new **Primary** and **Complement**
5. Tap **Save**

Building a custom white

Use the R, G, B, and W sliders to dial in the exact warmth and brightness you want. The W slider controls the dedicated white channel independently.

---

10. Remote access — control from anywhere

By default, Lumina controls your lights when you're on your home Wi-Fi. If your installer set up remote access, you can control them from anywhere with an internet connection — work, vacation, anywhere.

How it works

Your installer set up a small **bridge device** that stays on your home network. When you're away, your commands route securely through the bridge to your lights. The app handles the switching automatically — you don't do anything special.

Checking remote access status

1. **System** → **Remote Access**
2. A green indicator means remote access is active and working
3. Yellow or red means the bridge may need attention — contact your installer

Saving your home Wi-Fi for switching

If you tap **Detect Home Network** on the Remote Access screen, the app first asks for **Location permission**. This is required on Android (and recommended on iOS) so the app can read your current Wi-Fi network name. Without that permission, the saved-network detection can't work and you'll see a friendly prompt explaining what's needed. Your network name is encrypted before it's stored — Lumina never keeps your SSID in plain text.

Once your home network is saved, the app automatically routes your commands locally when you're connected to it, and through the bridge when you're not. No manual switching.

> **Tip:** If remote access wasn't part of your original install, ask your installer — it's a simple upgrade that makes a real difference when you're not home.

---

11. Welcome Home — your lights, on arrival

Set your lights to turn on automatically when you pull into the driveway. No tapping required.

Setting up the geofence

1. **System** → **Geofence Setup**
2. A map shows your home

3. Adjust the **radius slider** (100 m to 1,000 m) to set your arrival zone
4. Pick what happens when you arrive:
    - Apply a **favorite pattern**
    - Apply a **specific scene**
5. Toggle **"Only at Night"** to skip daytime triggers
6. Tap **Save**

How it works

When you drive into the zone, Lumina detects it and turns the lights on with your chosen pattern. When you leave, the lights can return to their schedule or turn off.

> **Heads-up:** Welcome Home needs location permission on your phone. The app asks for it the first time you set this up.

> **Tip:** A 200–300 m radius works well for most homes. Too small and the lights might not trigger in time; too large and they may come on before you're close.

---

12. My Properties

Got Lumina at more than one place — main home, vacation house, lake house? The **My Properties** screen keeps them organized.

Getting there

1. **System** → **My Properties**

Adding a property

1. Tap **+** or **Add Property**
2. Enter a name ("Lake House", "Beach Condo")
3. Start typing the address — suggestions appear as you type. Tap one to auto-fill, or type it manually.
4. Pick an icon

5. Tap **Save**

Linking controllers to a property

1. Tap **Controllers** on the property card
2. A list of your registered controllers appears
3. Toggle on each controller that belongs to this property
4. Changes save automatically

You can also tap "Tap to link controllers" on the property card as a shortcut.

Setting a primary property

1. Tap **Set Primary** on the property card
2. The primary loads by default when you open the app

Editing or removing

- Tap **Edit** to change the name, address, or icon
- Tap **Delete** to remove a property (unlinks controllers but doesn't delete them)

---

13. Simple Mode — for the rest of the household

If some family members just want to turn the lights on and off without learning every feature, turn on Simple Mode.

Turning it on

1. **System** → **Settings**
2. Toggle **Simple Mode** on
3. The app pares down to:
    - A home screen with large, easy-to-tap buttons
    - A settings screen
    - Your top 3–5 favorite presets
    - A simple brightness control

Turn it off anytime to return to the full interface.

---

14. Adding family members

You can invite up to 5 family members. Each one gets their own login.

Inviting someone

1. **System → Manage Users**
2. Tap **Invite User**
3. Enter their email
4. They'll get an email with a link to download Lumina and join your home

Everyone shares the same lights and schedules. Each person can have their own favorites and their own conversation with Lumina.

> **Tip:** Family members who want a simpler experience can turn on Simple Mode on their own device — it doesn't affect anyone else.

Permissions

You decide what each family member can do:

Permission	What it controls
Can Control	Turn lights on and off
Can Change Patterns	Browse and apply effects and colors
Can Edit Schedules	Create and modify automations
Can Invite	Add other family members
Can Access Settings	View system settings

Three handy **presets** make this one-tap:

Preset	Includes	Good for
Basic	Control + Change Patterns	Kids or occasional users
Full	Everything except owner-only actions	Spouse or partner
View Only	Can see but not change	Guests or house-sitters

Adjust individual permissions anytime from **System** → **Manage Users**.

---

15. Neighborhood Sync — light up the block together

Coordinate your lights with neighbors for game days, holidays, and block parties. Everyone lights up together.

Getting started

1. Go to **Neighborhood Sync** (from **System** or the dashboard)
2. Create a **new group** or **join an existing group** with a shared code
3. Walk through the short onboarding

What it can do

Feature	What it is
Create or Join a Group	Start a "crew" with neighbors who also have Lumina
Sync Control Panel	Start, pause, or stop a sync session
Game Day Sync	When your team plays, everyone's lights flash the colors together
Score Celebrations	Lights react in real time when your team scores

Handoff System	If a game starts during a holiday theme, the game takes priority and the holiday resumes after
Group Autopilot	The host sets Game Day Autopilot for the entire group

Notifications

You can get push notifications for Neighborhood Sync events:

- When a session starts
- When scores happen during a game
- When a session ends

Configure in **System** → **Settings**.

Same-day events

When you create or join a sync group with a recurring event (e.g., "Friday at 8 PM"), today's first occurrence is included automatically as long as the scheduled time hasn't already passed by more than 10 minutes. So if you join a group at 7:55 PM Friday for an 8 PM event, the sync still fires that night — you don't have to wait until next Friday.

> **Tip:** Share your group code at the next block party — the more neighbors who join, the more impressive the display.

---

16. Sports Alerts — the house reacts to the game

Sports Alerts flash your lights automatically when your team plays and scores. No manual taps.

Setting it up

1. Go to **Sports Alerts** (from **System** or **Settings**)
2. Tap **Add Team** to browse
3. Pick your teams from the supported leagues:

League	Examples
NFL	Chiefs, Cowboys, Eagles, and more
NBA	Lakers, Celtics, Warriors, and more
WNBA	Aces, Liberty, Fever, and more
MLB	Yankees, Dodgers, Cardinals, and more
NHL	Bruins, Penguins, Lightning, and more
MLS	Sporting KC, LAFC, Atlanta United, and more
NWSL	Current, Gotham FC, Wave, and more
NCAA	College football and basketball
FIFA	International teams and tournaments

4. For each team, pick the **alert types** you want (score, touchdown, basket, goal)
5. Assign which **zones** react
6. Use **Test Alert** to preview how it'll look

How it feels on game night

When a game is live, Lumina watches the score in real time. Your team scores — your lights flash the team colors, then settle back to whatever was running. When the game ends, your lights return to their regular schedule.

---

17. Game Day — lighting that shows up for your team

Game Day mode transforms your whole system for the big game.

Using it

1. Go to the **Game Day** screen

2. Pick the team whose game you want to activate
3. Your lights switch to **team colors** immediately
4. Live scoring prompts keep you in the moment
5. Your lights **return automatically** to your regular schedule when the game ends

Game Day pairs with **Neighborhood Sync** — when the host starts a Game Day session, every house in the group lights up together.

Light Up Now — instant team colors

Every team card on the Game Day screen has a full-width **Light Up Now** button. Tap it any time to apply your team's primary and secondary colors immediately, regardless of whether autopilot is enabled or whether a game is scheduled. The button uses your saved Game Day design if you've set one; otherwise it falls back to a clean two-color blend of the team's official colors.

> **Tip:** Use Light Up Now for tailgates, draft parties, watch nights with friends — any time you want the house in team colors without scheduling anything.

Same-day activation

If you enable Game Day for a team and there's still a game today whose start time is in the future (minus your lead time), today's game is included automatically. Previously the system only looked at tomorrow forward — now you can switch on Game Day at 1 PM and have the house ready for a 7 PM kickoff that same evening.

> **Tip:** If you set up Sports Alerts for a team, Game Day can activate automatically when that team plays. Check your team's settings to enable it.

---

18. Voice assistants

Hands-free control through Siri, Google Assistant, or Alexa.

Apple Siri (iPhone)

1. **System → Settings → Voice Assistant Guide**
2. Follow the Siri Shortcuts setup
3. Try:
    - "Hey Siri, turn on my lights"
    - "Hey Siri, set my lights to warm white"
    - "Hey Siri, dim the lights to 50 percent"

Google Assistant (Android)

1. **System → Settings → Voice Assistant Guide**
2. Follow the Google Assistant setup
3. Try:
    - "Hey Google, set my lights to warm white"
    - "Hey Google, turn off the patio lights"
    - "Hey Google, brighten my lights"

Amazon Alexa

1. Enable the **Lumina Smart Home Skill** in the Alexa app
2. Link your Lumina account when prompted
3. Try:
    - "Alexa, turn on the patio lights"
    - "Alexa, set the front lights to blue"
    - "Alexa, dim the lights to 30 percent"

Home Assistant

Advanced integration is available if you run Home Assistant. See **System → Settings → Voice Assistant Guide** for setup.

---

19. Roofline view

Your installer mapped your roofline during setup. You can see the result and make adjustments.

Viewing it

1. **System → Roofline Editor**
2. Your house image shows with roofline segments traced on top
3. Each segment shows its **channel assignment** and **LED count**
4. Segments are **color-coded by channel** so you can see which lights belong to which zone

Auto-detection

If you upload a new photo of your home, Lumina can **auto-trace** the roofline for you. You can fine-tune the result manually.

> **Heads-up:** Major changes to roofline configuration (adding segments, changing LED counts) should be coordinated with your installer so the hardware mapping stays accurate.

---

20. Lumina Studio — pro designs for landscape, patio, deck, or pool

Want a custom lighting design for an area beyond your roofline? Lumina Studio connects you with a design specialist.

Submitting a request

1. **System → Lumina Studio**
2. Pick the **area**:
   - Landscape
   - Patio
   - Deck
   - Pool
3. **Upload a photo** — camera or gallery
4. **Mark fixture locations** by tapping where you want lights
5. Add **fixture types and quantities**

6. Tap **Submit**

A Nex-Gen LED LLC design specialist will review your request and send you a custom lighting plan.

---

21. Refer and earn

Share Lumina with friends and neighbors. When they install, you earn a reward.

How it works

1. **System** → **Referral Program**
2. View your unique **referral code**
3. Share it via SMS or copy and send however you like
4. When your referral completes a Lumina installation, you earn a reward

Ambassador tiers

The more referrals that convert, the bigger the rewards:

Tier	Benefits
Bronze	Starting tier — base reward per referral
Gold	Increased reward
Platinum	Maximum reward + bonus perks

Track your referral count, total rewards earned, and progress toward the next tier — all from the Referral Program screen.

> **Tip:** Your neighbors are your best referrals. When they see your lights, they'll want their own — share your code and you both win.

---

22. Connection status

The app keeps you informed about the connection to your lighting system:

Indicator	What it means
Green dot	Connected — your lights are responding normally
"Reconnecting..."	Brief hiccup — the app is retrying automatically
"System Offline"	Can't reach your lights — usually means your phone isn't on the same Wi-Fi, or a controller needs a moment to restart
Bridge icon (green)	Remote access is active — you're controlling from away
Bridge icon (yellow)	Remote access is having trouble — the bridge may need attention

If your lights aren't responding, the most common fix is simply making sure your phone is on your home Wi-Fi.

---

23. Everyday scenarios

Evening routine

1. Open Lumina — dashboard loads with live status
2. Tap **Run Schedule** — tonight's scheduled pattern activates
3. Or ask Lumina: "Warm white for the evening"
4. Slide brightness to taste
5. Before bed: tap the power button or say "Turn off"

Game day

1. Lumina may suggest: "Game day tonight — Chiefs colors ready?"
2. Tap **Yes**

3. Or ask: "Chiefs colors" or "Game day mode"
4. Lights return to their regular schedule after the game

Holiday season

1. Auto-Pilot brings holiday themes to life around your selected holidays
2. Or browse **Explore** → **Holidays** and pick a theme
3. Schedule it: "Schedule Christmas lights from sunset to 11 PM"

Hosting a party

1. Ask Lumina: "Party mode" or "Something fun and colorful"
2. Or **Explore** → **Mood** → **Party / Energetic**
3. Turn on Audio Mode for music-reactive lighting (see the **Audio Mode Guide**)

---

24. Quick reference

Action	How
Turn lights on/off	Tap the power button
Change brightness	Slide the brightness control
Apply warm white	Tap **Warm White** preset
Apply a pattern	Explore tab, browse, tap
Ask Lumina	Chat bar — type or speak
View your schedule	Schedule tab
Add a new schedule	Schedule tab → **+**
View Autopilot Calendar	Schedule → **Autopilot Calendar**
Save a scene	Dashboard → **Save Current Design**

Create an AI design	Explore or System → **AI Design Studio**
Change white presets	System → **My Whites**
Turn on Audio Mode	Dashboard → **Audio Mode** button
Set up Welcome Home	System → **Geofence Setup**
Enable Simple Mode	System → Settings → **Simple Mode**
Add a family member	System → **Manage Users** → **Invite User**
Set user permissions	System → **Manage Users** → tap a member
Join Neighborhood Sync	System → **Neighborhood Sync**
Set up Sports Alerts	System → **Sports Alerts** → **Add Team**
Activate Game Day	Game Day screen → pick a team
Use voice assistant	System → Settings → **Voice Assistant Guide**
View roofline	System → **Roofline Editor**
Request a pro design	System → **Lumina Studio**
Share referral code	System → **Referral Program**

What success looks like

- You tap one preset or say one thing to Lumina and your house changes to match the moment
- Your weekly Auto-Pilot preview arrives Sunday evening and the next seven nights happen without any intervention
- When you're away, the green remote-access indicator is solid and remote commands work
- Guests at a party ask about the lights — specifically, about how they're reacting to the music

- A family member who prefers Simple Mode can run everything they need without calling you

If something isn't working

"My lights aren't responding."

- Make sure your phone is on the same Wi-Fi as your lighting system
- Check that the controllers have power
- Close and reopen the app
- In the app: **System** → **Controllers** → **Refresh**

"The app says 'No controllers found.'"

- Make sure your phone has Wi-Fi and location permissions enabled
- On iPhone: Settings → Lumina → Local Network is ON
- Try adding the controller manually by IP address

"A pattern looks different than I expected."

- Check your brightness — dim settings mute colors
- Make sure you've applied the pattern to the zone you intend
- Some effects are designed for specific LED counts

"I forgot my password."

- On the login screen, tap **Forgot Password**
- Enter your email
- Check your inbox for a reset link
- Create a new password

"Remote access isn't working."

- Check that **Remote Access** is enabled in Settings
- Confirm the bridge device at your home has power and is online (the green indicator tells you at a glance)
- If it's stuck, contact your installer

Need help?

- **In the app:** Ask Lumina — try "Help" or "How do I..."
- **Email:** support@nexgenled.com
- **Your installer:** the dealer who installed your system

For troubleshooting beyond this guide, see the separate Lumina Troubleshooting Guide.

Nex-Gen Lumina v2.2 — Residential User Guide — April 2026
