

Nex-Gen Lumina — Media Mode

Describes Lumina app version 2.5.10+89.

Media Mode gives you temporary, respectful access to any Lumina customer's lighting system so you can shoot great content — video, stills, promotional — without ever touching their saved settings, schedules, or account. It's the cleanest way to dial in the perfect look for a customer home, capture it, and leave their system exactly how you found it.

What you'll need

- The Lumina app on your phone or tablet
 - Your **6-character Media Access Code** (from your Nex-Gen LED LLC team lead)
 - The customer's email or street address to find their system
 - Permission from the customer for the content shoot (always)
-

What you can do in Media Mode

Find a customer system

Search by email or street address to locate the right home in the network.

Control their lights

Adjust colors, patterns, brightness, and effects for the duration of your shoot. Browse the full pattern library via the **Explore** tab and preview effects live.

View-only everywhere else

You can control lights during your session, but you cannot change schedules, settings, or account info. Customer data stays protected — that's the promise.

Treat access as a trust, not as an audited action. Media Mode sessions are not currently recorded to an access log, so nothing after the fact will show what you did or when. Get the customer's agreement before every shoot, and keep your access code to yourself.

About your access code

Your Media Access Code is a **6-character alphanumeric code** — something like A7X2K9.

- Codes are assigned by your Nex-Gen team lead
- Each team member has a unique code
- Codes may have expiration dates

Getting in

1. Open the Lumina app
2. On the Link Account screen, tap **Media** under **Professional Access**
3. Review the Media Mode information
4. Tap **Enter Media Access Code**
5. Enter your 6-character code
6. The Media Dashboard opens

Working from the Media Dashboard

Check the bridge status first

When you enter a customer's system, the **Home** tab shows a bridge status indicator so you know the home's lights are reachable before you start shooting. Green means the bridge is online and ready. Amber or red means there's a connectivity issue that will affect your session — deal with it before you roll.

Search for a customer

- Enter their email or street address
- Matching customer systems appear in the results
- Tap one to view that system

"View As" mode

- When you open a customer's system, you see their Home dashboard
- Control their lights as if you were them
- A banner at the top reminds you that you're in View As mode
- Tap the X on the banner to exit and return to search

What you can control

- Power on/off
- Brightness
- Pattern/effect (via the **Explore** tab)
- Color
- Speed and intensity

What's off-limits

- Schedules (the **Schedule** tab is read-only)
- System settings (the **System** tab is locked)
- Customer account info
- Adding or removing controllers
- Inviting users

Session rules

Rule	What it means
Code entry	Five wrong codes in a row locks the keypad — close and reopen the app to try again

Ending a session	Tap the X on the View As banner to leave a customer's system. Sign out of the app when you're finished for the day
Courtesy	Restore the original lighting when you're done
Permission	Make sure the customer has agreed to the shoot

Your session does not expire on its own. There is no inactivity timeout on Media Mode today — if you walk away with a customer's system open, it stays open. Exit View As and sign out when you finish a shoot rather than relying on the app to do it for you.

Best practices

1. **Coordinate with Sales** — confirm the customer has agreed to content creation
2. **Check bridge status** — make sure it's green before you start
3. **Note the starting setup** — snap a photo of the dashboard, write down the pattern name, whatever it takes to restore it later
4. **Restore when done** — return lights to the customer's preferred state
5. **Be considerate with timing** — avoid late evenings unless arranged
6. **Flag issues** — if you notice something off with the system, send a note to support

What success looks like

- Bridge status indicator was green the whole session
- You captured the content you came for — video, stills, or both
- The customer's lights are back to exactly how they were when you arrived
- You exited View As and signed out when you were done

If something isn't working

"Invalid access code." Your code may be expired or typed wrong. Confirm the 6 characters with your team lead.

"Cannot reach this customer's system." The bridge status will tell you why. If it's amber or red, the home's bridge is offline — you won't be able to shoot this session. Contact the customer or your team lead to figure out next steps.

"Can't find the customer in search." Double-check the email or address spelling. If the customer's account was created recently, it may take a few minutes to appear in search — wait and retry.

"A control isn't responding." If brightness or pattern changes stop registering, the bridge may have dropped. Pull to refresh the dashboard, and confirm the bridge indicator is still green.

Contact

- **Team lead** — request new codes or flag access issues
